## Part I Overture

<b>1</b>	<b>The Question of Quantum Indeterminacy</b> .....	3
1.1	Is Quantum Indeterminacy Irreducible? .....	3
1.2	Concepts of Cause .....	4
1.3	Quantum Randomness .....	5
1.4	A Simple Example of Indeterminacy .....	5
1.5	The Thesis .....	6
<b>2</b>	<b>Quantum Mathematics</b> .....	9
2.1	Mathematical Discipline .....	9
2.2	Semantic Interpretation .....	10
2.3	Possible Versus Necessary Information .....	11
2.4	Possible Versus Necessary Unitarity .....	12
2.5	Breaking Free of the Unitary Postulate .....	13
2.6	Principles for the Conveyance of Whole Information .....	13
2.7	Avoiding Confusion over Terminology .....	14
2.7.1	Orthogonal .....	14
2.7.2	Unitary and Unitary Hermitian .....	15
2.7.3	Fields and Scalars .....	16
<b>3</b>	<b>Elementary Algebra</b> .....	17
3.1	Elementary Algebra Exerts Impact on Quantum Mechanics ...	17
3.2	What is Elementary Algebra? .....	18
3.3	As Formal System .....	18
3.4	The Inherent Logic .....	18
<b>4</b>	<b>Logical Independence</b> .....	19
4.1	The 3-valued Logic of Hans Reichenbach .....	19
4.2	What is Logical Independence? .....	20
4.3	Axiom Systems .....	20
4.4	Logical Independence in Boolean Propositions .....	22
4.5	Referential Ambiguity and Logical Independence .....	22
4.6	Ingression, Self-reference and Accident .....	23

- 5 Preview** ..... 25
  - 5.1 About the Evidence ..... 25
  - 5.2 Mathematical Processing ..... 25
  - 5.3 Unitary On-Off Switching ..... 28
  - 5.4 Axiomatic Unitarity is Irrelevant and Obstructive ..... 29
  - 5.5 Logically Active Linear Algebra ..... 30
  - 5.6 Inclusion of the Imaginary Unit ..... 31
  - 5.7 The Density Operator and Referential Ambiguity ..... 31
  - 5.8 Uncausedness, Indefiniteness and Collapse ..... 32

**Part II The Evidence Base**

- 6 The Vienna Experiments** ..... 35
  - 6.1 Logical Independence Demonstrated in Experiments ..... 35
  - 6.2 The Experiment Setup ..... 36
  - 6.3 The Boolean Representation of Experiments ..... 37
  - 6.4 Locating Logical Independence in the Experiments ..... 38
    - 6.4.1 BlackBox-Processes ..... 39
    - 6.4.2 Measurement-Processes ..... 40
  - 6.5 Irreversibility: Indeterminacy & Collapse ..... 41
- 7 Logical Independence in Applied Mathematics** ..... 43
  - 7.1 Logical Independence is Everywhere ..... 43
  - 7.2 The Logically Independent Role of the Imaginary Unit ..... 44
  - 7.3 Machinery Necessitating the Imaginary Unit ..... 45
  - 7.4 Elementary Algebra as Logical Foundation  
to all Mathematical Physics ..... 49
- 8 Verifying Logical Independence of the Imaginary Unit** ..... 51
  - 8.1 Elementary Algebra as Formal System ..... 51
  - 8.2 The Field Axioms ..... 52
  - 8.3 Examples of Logical Independence in Elementary Algebra .... 53
    - 8.3.1 Manipulating Formulae Involving Quantifiers ..... 54
    - 8.3.2 Proofs ..... 55
  - 8.4 Model Theory: Soundness & Completeness ..... 56
    - 8.4.1 Logical Dependence ..... 56
    - 8.4.2 Logical Independence ..... 57
  - 8.5 Independence Truth-Tables in Elementary Algebra ..... 58

**Part III Evidence Deduced from the Vienna Experiments**

**9 Pure State Vienna Experiments are Non-Unitary** . . . . . 63

9.1 Vienna Experiments are not Isomorphic with Pauli . . . . . 63

9.2 Information Content of the Pauli Algebra . . . . . 65

9.3 The Ingression of Orthogonality Necessary for Mixed States . . . 67

9.4 New Insight . . . . . 69

**10 Matrix Representation of Indeterminate Information** . . . . . 71

10.1 Matrices for the Vienna Experiments . . . . . 71

10.2 Symmetry and the step-transition . . . . . 72

10.3 The Step-Transition Information . . . . . 73

10.4 The Pure State Eigensolutions . . . . . 73

**11 The Inaccessible Lost History at Measurement** . . . . . 75

11.1 Involvement of the Density Operator . . . . . 75

11.2 Referential Ambiguity in the Density Matrix . . . . . 76

11.3 Algebraic Processes in the Density Matrix . . . . . 76

11.4 Density Operator Generation is Deterministic . . . . . 77

11.5 Density Operator Undoing is Non-Deterministic . . . . . 78

11.6 Conclusions . . . . . 80

**Part IV Evidence Deduced from Mathematics Itself**

**12 Redundancy of the Unitary Postulate** . . . . . 83

12.1 The Status of Unitarity in Quantum Theory . . . . . 83

12.2 Homogeneity of Space and Wave Mechanics . . . . . 84

12.3 The New Independent Unitary Information . . . . . 89

12.4 Conclusion . . . . . 90

**13 Logically Independent Unitarity in the Free Particle** . . . . . 91

13.1 Pure State Superpositions . . . . . 91

13.2 Self-Reference in the Free Particle . . . . . 92

13.3 The Unitary Conditionality . . . . . 94

13.4 Rigorous treatment of the double integral . . . . . 95

13.5 Supporting Theorems . . . . . 98

**14 Logically independent Unitarity in the Pauli System** . . . . . 101

14.1 Introducing Self-Referential Orthogonality . . . . . 101

14.2 The Pure State Matrices . . . . . 102

14.3 The Self-Referential Processes . . . . . 103

14.4 The Unitary Conditionality of Self-Reference . . . . . 106

14.5 The Scalar Conditionality of Self-Reference . . . . . 107

**15 The Revised Approach to Unitarity** . . . . . 109

15.1 Unitarity — *by Postulate* . . . . . 109

15.2 The Logical Alteration Needed for Unitarity . . . . . 110

15.3 Unitary On–Off Switching . . . . . 111

**16 Self-Reference: The Origin of Uncausedness** . . . . . 113

16.1 What Self-referential Circularity Achieves . . . . . 113

16.2 Elementary Algebra as Environment . . . . . 114

16.3 Applying the Rules of Elementary Algebra . . . . . 114

16.4 The Linear Algebra Within . . . . . 115

16.5 Structural Intricacies . . . . . 115

16.6 Machines . . . . . 116

16.7 Accidental Coincidence . . . . . 117

16.8 A Self-Referential Definition for Orthogonality . . . . . 117

16.9 Self-Reference, Unitarity and Hilbert Spaces . . . . . 119

**Part V Conclusions and Philosophy**

**17 The Indefiniteness of Indeterminacy** . . . . . 123

17.1 The Epistemology of Perfect Symmetry . . . . . 123

17.2 Epistemology in Measurements . . . . . 124

17.3 How the Density Matrix Ambiguates Measurement . . . . . 125

**18 The Uncausedness of Indeterminacy** . . . . . 127

18.1 Non-Prevention & Cause . . . . . 127

**19 Concise Statement of Indeterminacy** . . . . . 129

19.1 The Question . . . . . 129

19.2 Indeterminacy’s indefiniteness in a Sentence . . . . . 129

19.3 Origins in Mathematical Processes . . . . . 130

19.4 Uncausedness . . . . . 130

19.5 Indefiniteness . . . . . 131

19.6 Final Statement . . . . . 132

**A Quantum Self-Reference and the Classical Paradoxes** . . . . .135

  A.1 Classical Self-referential Paradoxes . . . . .135

  A.2 Quantum Self-Reference . . . . .137

  A.3 Cantor’s Diagonal Argument . . . . .138

  A.4 Contradiction by Absence of Fixed-Point . . . . .140

    A.4.1 Formality Details . . . . .141

  A.5 Euclid’s Theorem on Primes, as Exercise . . . . .142

  A.6 Cantor Applied to Quantum Complementarity . . . . .144

    A.6.1 The Diagonal Function  $\Delta_{\text{ff}}$  . . . . .144

    A.6.2 Proof of Limitations in the Pure State Language . . . . .146

  A.7 Conclusion . . . . .148

**References** . . . . .149

**Index** . . . . .151
